Post hoc budget sweep: development-calibrated threshold transfer versus equal review
Panel D: nominal 95% paired Wilson-Newcombe intervals; calibration/re-ranking uncertainty excluded
A Review fraction after threshold transfer
Internal A
Internal B
External A
External B
Target (reference)
Test patients reviewed (%)
Development calibration / top-K target budget (%)
B External detection (16 low-quality cases)
Transferred cutoff A
Transferred cutoff B
Equal-review top K A
Equal-review top K B
Low-quality masks detected (%)
Development calibration / top-K target budget (%)
C Internal detection (93 low-quality cases)
Transferred cutoff A
Transferred cutoff B
Equal-review top K A
Equal-review top K B
Low-quality masks detected (%)
Development calibration / top-K target budget (%)
D External B minus A detection
Transferred cutoff
Equal-review top K
Difference (percentage points)
Development calibration / top-K target budget (%)
