A Image, reference-informed prompt and observed masks

BrEaST case001 | Blue: released reference | Orange: initial box | White: mask foreground

B Frozen SAM ViT-B inference

Box expansion: 10 % per side; clipped shifts: ±5 %.

Quality target: Dice(initial prediction, manual reference) < 0.70.

C Separate review scores

Method A: model confidence

Risk A = 1 − predicted IoU of initial mask

Method B: prompt disagreement

Risk B = 1 − mean Dice(initial, shifted masks)

Evaluate each score at its own locked cutoff.

Review flag = 1 if risk ≥ cutoff.
